Test

Test Name: Hereditary Nasal Parakeratosis (HNPK)

Result

Genotype: N/HNPK (CARRIER)
Interpretation: The examined dog is heterozygous for the mutation described to cause the Hereditary Nasal Parakeratosis.

This dog carry one copy of the intact gene and one copy of the affected gene.

Due to the autosomal recessive inheritance this dog will pass the affected gene on to its offspring with a 50% probability, but it will not develop HNPK disease itself.

The result is only valid for the breed: Labrador Retriever.

The result is valid for the submitted sample only
